DETAILED ACTION

Claims 1-30 are pending.

1. Restriction to one of the following inventions is required under 35 U.S.C. § 121:
 - I. Claims 1-3 and 5-14 drawn to a carrier having immobilized antigens, classified in Class 530, subclasses 300 and 350.
 - II. Claims 1-15 drawn to a carrier having immobilized antibodies, classified in Class 530, subclass 387.1.
 - III. Claims 16 – 18 and 20-29 , drawn to a method of manufacturing a carrier having immobilized antigens , classified in Class 530, subclasses 300 and 350.
 - IV. Claims 16-30 , drawn to a method of manufacturing a carrier having immobilized antibodies , classified in Class 530, subclass 387.1.
2. Groups I and II are different products. A carrier having immobilized antigens and a carrier having immobilized antibody differ with respect to their structures and physicochemical properties which require non-coextensive searches ; therefore each product is patentably distinct.
3. Groups III and IV are different methods. These invention are different with respect to ingredients, method steps, and endpoints; therefore, each method is patentably distinct.
4. Groups I/III and II/IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product, carrier can be made using an amino acid synthesizer or by various biochemical or recombinant techniques.

Art Unit: 1644

5. These inventions are distinct for the reasons given above. In addition, they have acquired a separate status in the art as shown by different classification and/or recognized divergent subject matter. Further, even though in some cases the classification is shared, a different field of search would be required based upon the structurally distinct products recited and the various methods of use comprising distinct method steps. Moreover, a prior art search also requires a literature search. It is an undue burden for the examiner to search more than one invention. Therefore restriction for examination purposes as indicated is proper.

A telephone call was made to Bruce H. Bernstein on 5/28/03 to request an oral election to the above restriction requirement, but did not result in an election being made.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michail Belyavskyi whose telephone number is (703) 308-4232. The examiner can normally be reached Monday through Friday from 9:00 AM to 5:30 PM. A message may be left on the examiner's voice mail service.
